

Argus - Remote Surveillance Installation guide

The "Argus - Remote Surveillance" system has two components: a server component, which is installed on the desktop PC and which is responsible for video capture and streaming, and a client component, installed on the phone, responsible for video rendering.

Phone (client) installation

Please refer to your phone manual for instructions on installing a .sis (Symbian) installation file.

Server installation

The server component runs on Windows XP and Windows 2000 operating systems.

1. Download the server from <http://www.carpathia.ro/mobile> (arsserver_setup.zip)
2. Unzip arserver_setup.zip and start the setup program. Follow the setup wizard instructions.
3. Start the server from Start -> Programs -> ARS Server.
4. Enter the server password and phone IMEI when requested. (Please see "User Guide" for more details.)

Software license code

When started for the first time the "Argus RS" (client) application requires a registration key. You will receive this registration key, via e-mail, when purchasing the software. The registration data can be viewed/edited anytime by accessing the application **Registration** menu. During the three days trial period you can use the word "trial" as the registration key (if you want to extend the trial period please contact us).
